

Why ProjectDox® first ?

Selecting ePlan First Delivers BIG value - NOW

Consider that...

The average permitting system takes anywhere from **18 to 36+** months to install.

Permitting systems can cost from **\$500 K** to over **\$10 M!**

Most of your pain points are really solved by automating the **applicant submission** and **plan review process** vs actual permit issuance.

Accelerating plan review **brings in more permit and tax fees faster**, which can help pay for your expensive new permitting system!

Ensure that your community benefits right away from your investment.

Solve your applicants' problems and improve your services at the beginning of the process - don't wait for a lengthy permitting update to start seeing value!

Smaller Cost, Greater Value Up Front

Most ePlan software products can't come online until **AFTER** the permitting system is installed or updated - **ProjectDox is different.**

As a stand-alone solution, ProjectDox can be installed independently of any permitting software to automate the plan submission and review - right away saving time and costs of lengthy paper review cycles.

And, because ProjectDox can integrate with any permitting system, you can start it with an existing permitting system then easily migrate it to a new permitting system in the future.

Customers who install ePlan first before a new permitting system report greater internal and citizen satisfaction and success:

"We are so glad we chose to focus on going to paperless plan submission and review as a first step - our citizens are happy with the faster, easier process!"

"We've calculated return on investment at 80% in the first year alone."

"Our City achieved a 25% reduction in review times overall after 2 months of using ProjectDox."

According to Fiatch™ the leading source for emerging, advanced and innovative capital project delivery practices:

Jurisdictions using ePlan technology have reduced plan review and approval times between 30-40% on average
