

**Reliable and
Secure**

“Arizona has recently been recognized as the nation's leader in cyber security, offering the best cyber security talent and solutions in the country.

PhoenixNAP is a focused organization, well connected, and in-the-know on cyber security – smart people with smart technologies delivering outstanding solutions for their customers.”

- Brett Scott, nationally recognized authority on cyber security

Hosted ProjectDox Service

A new option for deploying the industry's leading electronic plan review solution

Avolve Software Hosting Services offers you a managed, hosted solution for deploying ProjectDox and Online Application Submission (OAS) to your community. Now, jurisdictions can get all of the benefits of our Community Built Environment Information Access system without installing new hardware and software in their own data center.

Accelerated Time to Value

The ProjectDox Hosted Service is deployed quickly to deliver business value faster. There is no need to worry about provisioning hardware and setting up the ProjectDox application. Those tasks are done for you with shorter lead times, fewer resources, and less training than on-premises approaches require. Avolve consultants define your business workflows and configure the system. With end user training delivered by Avolve Training & Education Services, you are ready to start using the industry's leading electronic plan review and management solution.

Avolve Software offers the #1 electronic plan review solution in the marketplace.

More Cities and Counties use ProjectDox than all other comparable products combined!

Now you have a choice where ProjectDox is hosted and how it is managed.

ProjectDox can be integrated with other government software and e-permitting products. Talk to your Avolve Software sales representative for details.

A Managed Solution

Your ProjectDox and OAS hosted solution is managed by Avolve's expert support staff, freeing your valuable IT resources for other critical tasks. Avolve keeps your ProjectDox and OAS servers and database tuned for optimum performance. Problems are detected and analyzed quickly and resolution occurs faster. Because we focus exclusively on Avolve Software products, you can expect a more trouble-free operations environment that supports a superior user-experience.

Security is Priority #1

System, application and data security is paramount. The Avolve SOC 2-audited, tier-2 hosting facilities meet or exceed federal requirements for HIPPA/SOX/GLBA and PCI DSS. State-of-the-art network, system and data protection tools are used to monitor and secure your ProjectDox and OAS systems. All ProjectDox and OAS hosted customers run on their own isolated, private network segment within the data center. Your data is also backed up and accessible. We deliver peace of mind regarding the security, confidentiality, and processing integrity of our hosting environment.

Stringent SLA Guidelines

Avolve has designed our Professional Hosting Services to deliver uninterrupted operation and predictable, fast performance. System memory, CPU, and data storage resources are continuously monitored, ensuring your system is operating at full efficiency and availability. Our standard Service Level Agreement guarantees 99.9% on hardware and network availability.

Integrates to Other Back-end Systems

Customers use ProjectDox and OAS to open silos of project and built environment information that plague organizations, enabling better collaboration and coordination. ProjectDox and OAS will integrate with community development, ERP, permitting, document management and other enterprise applications when located on your premises or with our hosted service.
