software

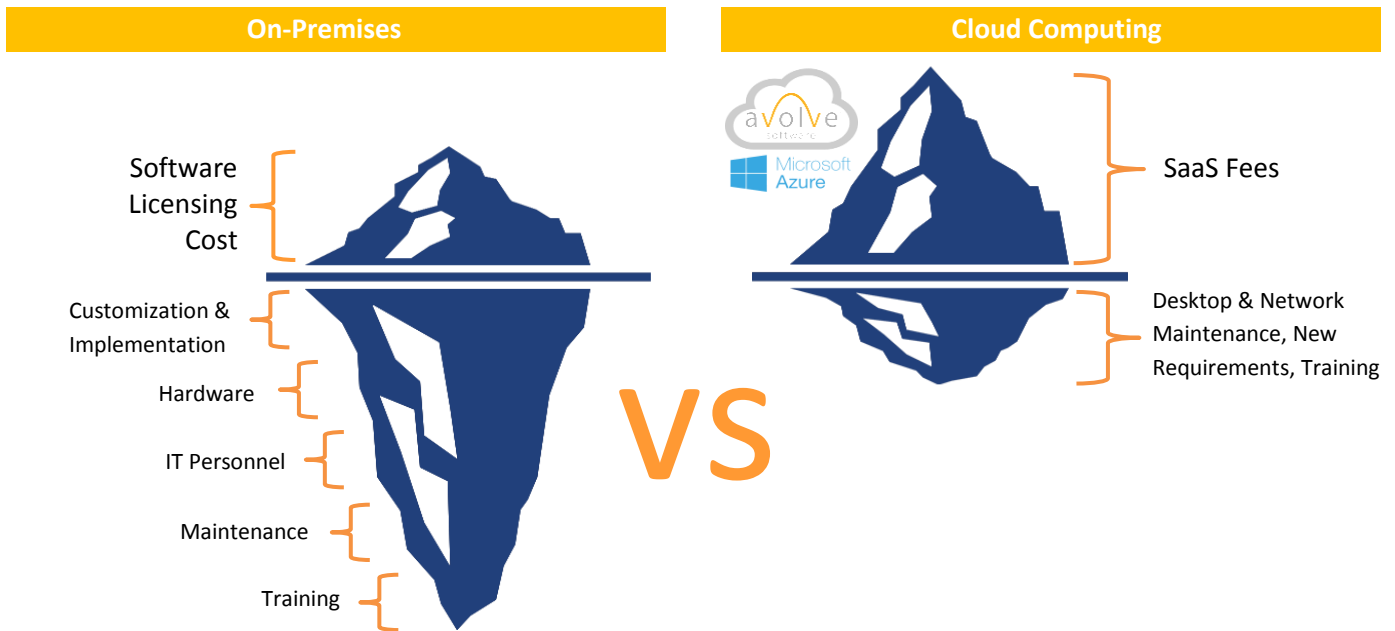

It's Time to Move

Cloud computing improves efficiency and security. It also saves money so you can do **more with less**.

Transforming your jurisdiction to a digital platform not only makes it much easier to deliver efficient services to your community - it ensures rapid access to new technologies and ongoing security enhancements to meet ever-evolving needs.

“Microsoft is pleased to welcome Avolve to our Microsoft Azure partner network. Azure-hosted solutions from Avolve offer jurisdictions a leading ePlan system in one of the most secure hosted environments available.”

- Kim Nelson, Director Small & Local Government Solutions, Microsoft Corporation

Ongoing Costs

- Apply patches, upgrades
- Downtime
- Performance tuning
- Rewrite customizations
- Rewrite integrations
- Upgrade dependent applications
- Ongoing burden on IT (hardware)
- Maintain/upgrade network
- Maintain/upgrade security
- Maintain/upgrade database

Ongoing Costs

- In-house desktop & network IT cost
- Software license maintenance
- New requirement ProServices

The Transition Is Easy

- ✓ *Avolve Software is already on Microsoft .NET and SQL Database Architecture*
- ✓ *Avolve Software is a MS Gold Partner, Certified Solution Provider on MS Azure*
- ✓ *Avolve Software is on the same Cloud infrastructure as Office 365 and SharePoint*
- ✓ *Avolve Software Continued Support for Environmental Sustainability with Paperless Systems on Azure*
- ✓ *Avolve Software Monitoring, Support, Investigation and Updates*

Your Data Stays Safe

Both technological safeguards, such as encrypted communications, and operation processes help keep customer data secure. Customers have the flexibility to implement additional encryption and manage their own keys.

Data Segregation

Logical isolation segregates each customer's data from that of others.

At-rest data protection

Customers can implement a range of encryption options for virtual machines and storage.

In-transit data protection

Industry-standard protocols encrypt data in transit to/from outside components, as well as data in transit internally by default.

Encryption

Data encryption in storage or in transit can be deployed by the customer to align with best practices for ensuring confidentiality and integrity of data.

Data redundancy

Customers have multiple options for replicating data, including number of copies and number and location of replication datacenters.

Data destruction

When customers delete data or leave Azure, Microsoft follows procedures to render the previous customer's data inaccessible.
